

In structuring the information on this site, I prioritized clarity and consistency by using a modular layout with a clear top navigation bar and sectioned content areas. Each module follows a uniform structure, helping users intuitively navigate and focus on one concept at a time. I incorporated subheadings and in-page navigation to support skimmability and quick access, which is particularly important for content-heavy instructional material.

If I had more time, I would enhance the accessibility of the site by implementing ARIA roles and improving semantic tagging. I would also refine the responsive design for mobile users and explore using a collapsible or sticky sidebar for the contents section to reduce scrolling. Visually, I'd like to explore more distinct styles for each content type (e.g., case studies, sidebars, examples) to improve visual hierarchy and user engagement. Additional interactivity like tooltips or embedded quizzes would further enrich the user experience.
